

Survey on Functional Requirements of GenBFKit

Survey Date: ____ Year ____ Month ____ Day

Respondent: _____

Team: Group ____ (1 / 2)

Dear On-site Operators:

Hello! To optimize the GenBFKit open-source data integration framework and better adapt to the on-site production needs of blast furnace ironmaking, this survey is conducted. All questions focus on the necessity of the framework's core functions and have no right or wrong answers. We sincerely request you to fill in the questionnaire based on your daily operation experience.

Note: Please tick "√" in the "Yes" or "No" column for each question; only one option is allowed.

1. Core Functional Requirements Survey

Do you think GenBFKit should have the following features?

No.	Questions	Yes	No
1.	Feature "not changing existing data storage and management mode" to avoid affecting on-site production?	☐	☐
2.	Support "modular data processing and integration" for on-demand data calling?	☐	☐
3.	Have a built-in "time-scale alignment template" that is helpful for on-site operations?	☐	☐
4.	Have "cross-BF data collaboration and structure reuse" capability to adapt to differences among various BF's?	☐	☐
5.	Provide a "unified data calling interface" to simplify on-site data query and use?	☐	☐
6.	Feature "low labor-cost expansion" to adapt to process/equipment upgrades without massive manual corrections?	☐	☐
7.	Be compatible with "unstructured data processing (e.g., equipment logs)" to meet on-site multi-type data needs?	☐	☐

2. Supplementary Suggestions

Do you have any other supplementary suggestions or optimization directions for the functional design of GenBFKit?

Thank you for your cooperation and support!
